

Here's the conversion chart as to how to hook up the F3 harness to the F4i guages...

F3 to F4i

Green/Blue---- Green/Blue

Pink/Green----Pink/Green

Black/Brown----Black/Brown

Brown----Brown/White

Light Green/Red----Light Green/Red

Orange----Orange

Light Blue----Light Blue

Blue----Blue

Blue/Red----Blue/Red

Green (one of them)----Green

Green/Black----Green/Black

Yellow/Green----Yellow/Green

Pink (solid pink) - ground this out (other green)

Brown/Black - fuel reserve sensor - not used

Red/Green - battery(+) - connect to battery

White/Blue - fi indicator - not used.

Yellow/Black----Green/White

This is where you have an option..

courtesy of iwanta900rr:I finally discovered how to use the 'FI' bulb as the kickstand indicator!!

To add, it is also functional in that if you put the kickstand down in gear, it stalls!

f3's yellow/black wire connects to f4i's white/blue wire AND NOT it's green/black wire.
