

HONDA CBR600 F3 Air Solenoid Modification

This is the mod for removing the Air Solenoid. What is supposed to happen is the air solenoid which is plugged into the Wiring Harness, is connected to the Speedometer, and for speeds below 12Mph the air is taken from the front Ram pipes, for speeds over 12Mph it is taken from the SCOOP. To delete the Air Solenoid, remove the Air Solenoid and front pipes as shown below
